

## **BIO-DETOXIFICATION**

Are Toxins in your body affecting your health? Learn how to survive in a toxic world and what role a nutritional detoxification program may play in achieving a better state of health. To find out if you and your family may be toxic, take this free bio-toxicity self-assessment test.

### **ARE BODY TOXINS MAKING YOU SICK?**

Optimum energy and radiant health are the products of internal cleansing. Each of us understands how important it is to be clean on the outside, but do not realize it's even more important to be clean on the inside.

There is no doubt about it...we do not live in a pristine world. We live in an environment unlike any in history. In today's world of processed foods and environmental pollution, toxic substances exist almost everywhere.

### **HOW DOES DETOXIFICATION WORK?**

The process of Bio-detoxification takes place primarily in the liver. The liver is the key organ in our body's self defense system. Detoxification is largely accomplished in 2 phases. In phase I, the body's enzymes activate the toxic substances to make them more accessible in phase II. In phase II, specific enzymes convert toxins into water soluble and harmless molecules that are then eliminated by the body.

### **PROTECT YOUR FAMILY AND YOURSELF**

The key to protection is to rid the body of toxins. The body is designed, by nature to rid itself of harmful toxins through a process called bio-detoxification (Bio=life, Detoxification=cleansing). Unfortunately, in today's world the body is overwhelmed by a great number of toxins found in the air, water, and the food we eat. The good news is that your healthcare provider can offer a scientific and clinically effective cleansing program to clear the body of harmful toxins.

### **FOR SOUND ADVICE, ASK YOUR HEALTHCARE PROFESSIONAL...**

Who specializes in Bio-detoxification, about simple, yet effective nutritional guideline, in combination with a detoxification beverage, and cleansing herbs to help your body eliminate toxins and prevent disease.
